

Brendon Delloma

I implemented The clock which is from this website <https://www.ssaurel.com/blog/learn-to-draw-an-analog-clock-on-android-with-the-canvas-2d-api/>. I then got the ability to change month day and year but that is as far as I was able to make it. I had issues designing it and having multiple projects and the coding competition so I wasn't able to complete it.
